Description

Dear Geoportal Team,

Dear Angelo

Looking on the new geoportal interface (good job), I can see that some of metadata coming from the "Metawal" metadata catalog of Walloon Region (Belgium) has disappeared from the list of the dataset (cf.

<http://inspire-geoportal.ec.europa.eu/results.html?country=be&view=details&theme=none>) and none of the datasets listed for this catalog are linked to their View and Download Services, which was the case before the migration for all our datasets.

Also, I noted that Metawal Discovery Service has disappeared from the harvesting status page

http://inspire-geoportal.ec.europa.eu/harvesting_status.html

Before going any further on our infrastructure, I would like to know if the migration process and the synchronization of the metadata is completed from your side and if you can harvest Metawal catalog (we don't have access to the new harvesting console yet)

Thanks for your feedback

Geoffroy

Dear Geoffroy,

many thanks indeed for reporting this issue, it's fixed now.

Best regards,

Angelo
