### Description

Dear INSPIRE helpdesk team,

We recently started to encode the conformity of datasets and network services following the requirements and recommendations in Section 2.4.1 of the [metadata TG2](#). Unfortunately, after doing this, the indicators DSI2.x and NSI4.x dropped to 0.0% in the latest monitoring report. In the reference validator ([ETFwebapp](#)) records succeed all TG2 test cases (see attached sample reports).

Could you please tell us what we need to do to have the declared conformity correctly reflected in the monitoring report?

many thanks,

Stijn

NB: We encode conformity of network services as follows:

```

Dear Davide, I think we have been following the metadata TG2 closely.

Is it possible that the harvestconsole cannot deal with conformity encoded as TG2?
